

GOLDEN PAWS MONTH - because our hardworking mates deserve the best

Our loyal working dogs give us everything from sunup to sundown, in all conditions. As they enter their senior years (usually from age 7+), it's time we give a little extra back.

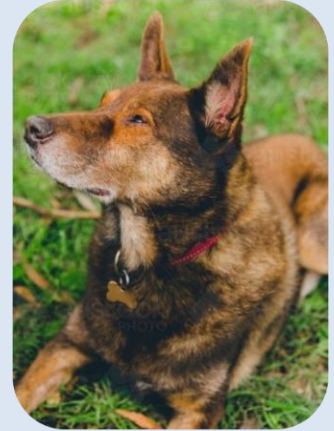

Throughout **Golden Paws Month**, we're offering **discounted senior health check and blood test packages (save \$50-\$65!)**, including joint assessments, dental checks, and tailored advice to keep your older working dog comfortable and active for as long as possible.

Subtle signs like slowing down, stiffness, or changes in appetite can often be managed or improved, don't just chalk it up to "old age."

Book in this month and give your old mate the quality of life they've earned.

 **Ask our team about Golden Paws Month specials today!**

Automatically go in the draw to win a free 4cyte for your pet with every Golden Paws consultation.

HENDRA VIRUS DETECTED IN SOUTH-EAST QLD!

A recent case of Hendra virus in south-east Queensland has resulted in the death of an unvaccinated horse, Queensland's first confirmed case of the virus in three years.

Hendra virus is a rare but deadly disease transmitted from flying foxes to horses. Horses can then pass the infection onto humans. The virus can cause a range of symptoms in horses:

Usually there is a rapid onset of illness, fever, increased heart rate and rapid deterioration with respiratory and/or neurological (nervous system) signs. There is no vaccine for humans, but an effective vaccine is available for horses. Vaccination remains the most reliable protection against this disease.

We encourage all horse owners to vaccinate their animals and maintain good hygiene practices. These proactive steps help protect not only your horses but also the broader community.

For more information or to book a vaccination, please contact our clinic.
